### PANASONIC ADVANCED VENTILATION SOLUTIONS

The SelectCycler System is designed to work in combination with the Panasonic WhisperGreen Select ventilation fan to operate in Hybrid or Balanced ventilation mode to meet ASHRAE 62.2 ventilation standards. The SelectCycler kit comes with a wall mount controller, FanConnect™ wall switch and either the 4", 6", 8" or 10" supply damper. The wall-mounted controller with ASHRAE 62.2 programmable run cycles provides precise ventilation control using its patented ventilation algorithm to calculate supply duct and exhaust fan run times. The controller also allows for programmable hours of operation. All components are evaluated by Underwriters Laboratories to conform with both UL and cUL Safety Standards.
