Unity Home System

Integration Module replaces many modules required to run separate systems.

Video Door Unit allows homeowners to see and talk with visitors.

Graphical User Interface generated by the Integration Module makes it easy to control the Unity Home System.

All products offered in the Studio Design.

3-Room Unity Home System Kit

INNOVATIVE TECHNOLOGY

ONE SYSTEM – COMPLETE CONTROL

The Integration Module is a dedicated home systems controller designed to tie camera, lighting, intercom and audio systems together. The Integration Module generates the graphical user interface (GUI) that homeowners will come to know as their Unity Home System.

THE HOMEOWNER VIEW

A graphical user interface allows home-owners to see into and control their Unity Home System. It is logically laid out for homeowners to be able to call room-to-room with their intercom, adjust the volume of the music playing in the living room and view the front door camera with the navigational arrows and soft buttons on the LCD Console. With the release of software version 2.3 and additional hardware pieces, the Unity Home System now includes support for lighting control and Internet Radio, as well as mobile device control, remote IP camera viewing, and interface expansion capabilities.

7" LCD Console connected
to the Integration Module
(HA5000, HA6001)

SYSTEM FEATURES

- Up to six cameras per system

- Up to eight LCDs or TV Displays per system with expansion (TV displays can be shared for even more interfaces)

- System can be expanded for up to 16 audio zones

- Efficient Cat 5 installation

- All units self-discover when connected to power

- No programming required, easy personalization options

- Supports RF lighting control, thermostat functionality, messaging, and mobile access.

WIRING DIAGRAM

INSTALLATION AT-A-GLANCE
UNITY HOME SYSTEMS

1. Install the Integration Module in the enclosure.

2. Run the appropriate number of cables to each device to be connected to the Integration Module.

3. Install devices throughout the house.

4. Connect cables at the device and at the Integration Module. Allow devices to self discover.

5. Optionally expand.

6. Personalize.

• *Network connection is required.*
