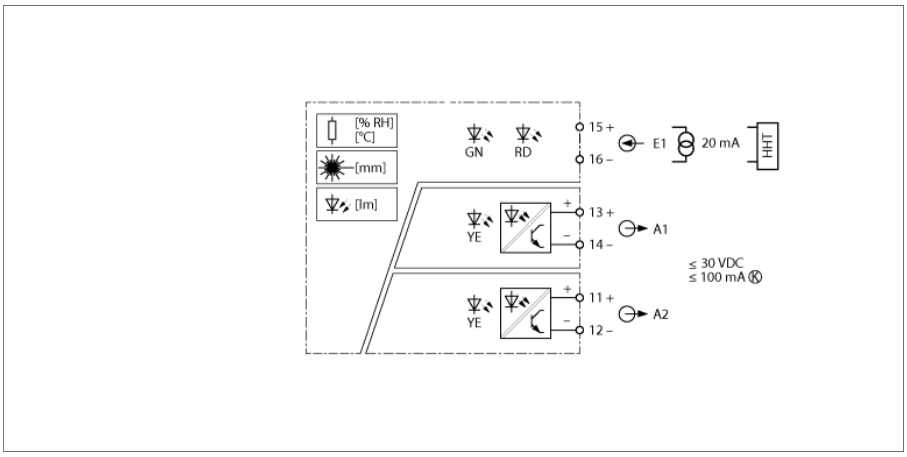
Cabinet Guard
Internal Sensors
IMX12-CCM02-MTI-1I2T-HC/L



The cabinet guard IMX12-CCM02-MTI-1I2T-HC/L monitors preset environmental limits inside the control cabinet. The environmental conditions are detected by a humidity or temperature sensor, a brightness sensor and a triangulation sensor that detects an incorrectly closed cabinet door. When exceeding or falling below the set limit values an error message appears on the LED display or is reported via the switching outputs and the HART interface to the host control system.

The device is supplied loop powered from the 4…20 mA current interface. When used in Ex areas, the device can be supplied via the TURCK isolating transducer IMX12-AI01-… .

The teaching is done manually on the device; extended parameterization is carried out via the HART interface.

The device is equipped with 8 screw terminals for connecting the HART® interface or power supply and switching outputs and can be mounted on a DIN rail acc. to EN 60715.

Furthermore, the device has 4 front-mounted LEDs to display the operating status (green), the error message (red) and the states of the switching outputs (2 x yellow). If an error occurs, a current of > 20.5 mA is output.

- **Two potential-free contacts**
- **Temperature detection**
- **Moisture detection**
- **Detection of distance to cabinet door**
- **Galvanic isolation of outputs (A1/A2)**
- **Removable screw terminals**
- **ATEX, IECEx**
